

Automate Wage Progression Calculations for UKG Solutions

What is Step Pay Progression?

Step Pay Progression is a solution to automate the complex calculator for hourly wage increase for those organizations that have union-specific obligations for wage progression. Using UKG Dimensions data, the solution calculates employee step pay amounts and transfers them to any UKG solution or third-party payroll system.

Automatically Import Employee Data

The initial step is to pull the UKG solutions employee data into CloudApper's Step Progression solution. Employee time card data is automatically pulled from the UKG solution via REST API.

Create Custom Pay Tiers

The next step is to provide hourly pay tiers for regular positions. Here, you may specify custom pay tiers for determining when an employee's pay should increase based on their total number of hours worked.

Automatic Tier Upgrade

Our solution uses a bespoke workflow to automatically adjust hourly wages in accordance with the predetermined threshold. This assures precise and efficient computation of pay increases with no need for human intervention.

Update & Get notified

Once the step pay adjustments have been computed, our system will immediately revise hourly wages in UKG Dimensions, Pro, or any other payroll system you use. Our system will inform the manager if an employee is promoted to the next pay grade, so you are always aware of any changes to your payroll.

Maximize UKG Efficiency With CloudApper AI

Unlocking the potential of UKG solutions data with CloudApper AI can bring significant benefits to organizations. By automating repetitive and time-consuming tasks, organizations can improve efficiency, reduce errors, and better manage and understand data. Additionally, customizing your UKG software with CloudApper can increase employee satisfaction and productivity, and help organizations adapt to new opportunities or challenges.

Personalize Your UKG Software Experience

**Import data
