

RightPunch™

By **CloudApper**

Turn any tablet into a custom time capture solution

Works seamlessly with **UKG** solutions

RightPunch is a UKG time capture solution that runs on off-the-shelf (OTS) iOS or Android devices. With various customization options easily delivered through the CloudApper platform. **RightPunch** integrates directly with UKG to provide a low-cost and reliable time capture experience.

RightPunch Benefits

Simple and Cost-Effective

RightPunch is the most cost-effective employee time capture solution for UKG. With RightPunch, your company can save on fees associated with time capture hardware installation and plastic ID badges. RightPunch is a simple, paperless, digitized system that can be set up in minutes.

Prevent Buddy Punching

For businesses and government agencies, many hourly employees steal time by committing what's known as *buddy punching*, where employees clock in and out for each other. RightPunch with face or fingerprint ID eliminates this costly issue while simplifying the time capture process for employees.

Reduce Payroll Loss

Buddy punching can end up costing employers up to 3% of gross payroll. With RightPunch, companies can reduce payroll loss by accurately collecting employee punches. Employers can also establish more time capture touchpoints since RightPunch is so affordable.

RightPunch™ capabilities

Biometrics & Other Punch Options

With RightPunch, employees can submit time data by scanning a QR code, NFC tag, PIN, or fingerprint or face biometrics. This versatility ensures that all UKG customers can tailor the solution to their needs.

Seamless Integration

RightPunch seamlessly integrates with UKG Workforce Central, Ready, and Dimensions. With a simple installation and setup process, our team can have you up and running within a few minutes!

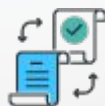

Confirm Employee Availability

With RightPunch, organizations can prevent unexpected employee absences. Before employees start their shifts, RightPunch sends them a notification via email, SMS, or slack to inform a supervisor about their availability.

Desktop and Mobile App

RightPunch can run on iOS, Android, and Windows devices to collect employee punches. Time data is synchronized in real-time with your UKG software. You can also view your RightPunch data through its web application.

Attestation & Job Transfers

Configure attestation questions within the RightPunch app, collect the information from employees, and seamlessly submit the data to UKG for compliance tracking. RightPunch also supports cost center transfers for UKG Ready and Dimensions.

Geo-Fencing

With geo-fencing enabled, employees can only submit punches when they are at their work sites. Eliminate loss from non-productive time, improve accountability, and boost productivity by creating an acceptable GPS radius around each work location.

Key reasons to invest in **RightPunch?**

Increased Accountability

When used with our cloud-based face biometrics system, employees are instantly identified when they take their picture. This prevents "buddy punching" and holds employees accountable for their time and attendance.

Easy Deployment

RightPunch is simple to setup and deploy. Simply create a CloudApper account, configure your UKG settings, enroll your employees, and you are ready to start!

Affordability

For \$10 per tablet per month, RightPunch provides a very affordable time capture option for UKG. With access to the CloudApper platform, customers can also build and customize unlimited apps to improve employee productivity!

Software Flexibility

The RightPunch app works on iOS and Android devices. Customers can set up low-cost tablets as clocks or enable employees to submit punches from their own smartphones. Easily capture punches from any location with RightPunch.

About CloudApper

CloudApper is a no-code platform that helps create enterprise web and mobile apps that can integrate seamlessly with third-party systems. Organizations can improve responsiveness, optimize resources, and build custom solutions to match their workflow with CloudApper. The no-code AI platform helps organizations achieve digital transformation, improve employee productivity, and reduce costs significantly by helping them work smarter and faster.
