Enhancing Workforce Management Efficiency:

Applegreen's Success with CloudApper AI TimeClock for UKG Dimensions

Challenges and Objectives

Cost-Effective Solution: Applegreen looked for a cheaper alternative to the UKG Intouch time clock so that they could better manage their time tracking costs across all of their convenience stores, restaurants, and shopping centers.

Facial Recognition Configuration: The business planned to utilize face recognition technology with their newly adopted UKG Dimensions solution for time keeping purposes on iPad and Tablet devices.

Custom Workflow Implementation: Applegreen required a specialized workflow that would enforce a 30-minute break for minor employees to be in full compliance with labor rules and to promote the health and safety of those working there.

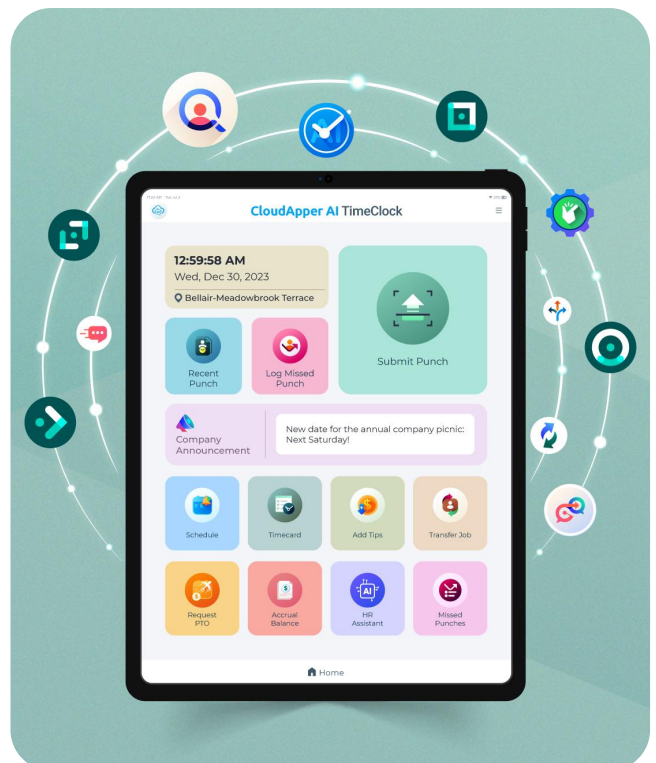

CloudApper AI TimeClock Solutions

Budget-Friendly Alternative: Applegreen's goal is to minimize costs without sacrificing productivity, and the CloudApper AI TimeClock has shown to be an excellent and affordable replacement for the UKG Intouch time clock.

Facial Recognition Integration: Employees would have no trouble clocking in and out with the face recognition setup in CloudApper AI TimeClock, which also increased the system's security.

Custom Workflow Implementation: The adaptability of CloudApper AI TimeClock enabled for the automatic enforcement of a required 30-minute break for minor employees, therefore guaranteeing that the company complied with applicable labor rules.

Applegreen's Success with CloudApper AI TimeClock for UKG Dimensions

Enhancing Workforce Management Efficiency:

Applegreen's Success with CloudApper AI TimeClock for UKG Dimensions

Conclusion

Applegreen's success with CloudApper AI TimeClock for UKG Dimensions is a testament to the power of an affordable and customizable time tracking solution. By leveraging facial recognition and custom workflows, Applegreen enhanced workforce management efficiency, reduced costs, and ensured compliance with labor laws. The integration of CloudApper AI TimeClock with UKG Dimensions positioned Applegreen for continued growth and success in their petrol forecourt retail operations.

About CloudApper

CloudApper is revolutionizing the software development landscape by introducing a groundbreaking AI platform. By eliminating the need for manual coding, our platform effectively addresses the common challenges of developer shortage and turnover. With our innovative solution, companies can bypass the complexities associated with writing and managing code, enabling them to concentrate on expanding their business and achieving growth objectives.
