

Why Should UKG Users Leverage Custom BI Dashboards?

Making informed decisions within workforce management (WFM) is crucial for tackling ongoing problems and making the most out of available opportunities. Accurate, complete, and up-to-date information is required to make data-driven decisions, as it reduces complexities and provides deeper insights - business intelligence (BI) dashboards can help with that.

While organizations are using UKG solutions for optimizing WFM, many have diverse requirements that need customizations. For instance, many UKG customers have to make sense of specific information or pull it from several sources - something that's complicated for regular dashboards. The CloudApper platform provides custom BI dashboards for UKG that help visualize information and make informed decisions.

On average, organizations spend a third of their time dealing with inefficient processes, costing \$2.6m annually.

Enable

Impact of not using custom dashboards for UKG

Not utilizing custom BI dashboards for UKG data can be detrimental to organizations that need them. Some of the problems are:

Missed insights

Organizations cannot make data-driven decisions as not all the necessary information is used for the dashboards.

Reduced efficiency

Organizations need to process the additional data manually - requiring extra time and hampering regular processes.

Inaccurate representation

Organizations cannot utilize all of the required data - preventing them from getting a full picture via the dashboards.

Increased costs

To process the required information, organizations must use multiple solutions - increasing complexities and costs.

Overall, the lack of custom BI dashboards leads to higher costs, wrong analysis, and reduced efficiency - leading to undesirable decisions by the management.

Bad data costs the US \$3 trillion per year as it leads to making the wrong decisions.

Harvard Business Publishing

UKG customers need custom BI dashboards that help them analyze the required data to gain accurate insights and make data-driven decisions.

Custom BI dashboards for UKG

CloudApper provides robust and custom BI dashboards for UKG. The platform seamlessly connects to UKG solutions and third-party systems, pulls the necessary data, and presents it visually within the dashboards. CloudApper can easily customize the BI dashboards so that UKG customers can view the unique information they need to understand trends, gain deeper insights, and make informed decisions.

UKG customers implement CloudApper, which integrates with their software.

After integration, CloudApper uses relevant data from UKG and third-party systems.

The BI dashboards can represent the information on its interface or send it to UKG.

CloudApper helps UKG customers pull relevant data to create custom BI dashboards, highlighting required employee metrics and using them to uncover hidden patterns.

Businesses using BI are five times more likely to reach faster decisions than those that do not.

Finances Online

Companies with CEOs that make data-driven decisions are 77% more likely to succeed.

Deloitte

Advantages of using custom BI dashboards for UKG

Customization

CloudApper offers several customizable dashboards that managers can use for predictive analysis, compensation analysis, employment analytics, diversity, equity, and inclusion (DEI) analytics, and more.

Time and cost savings

CloudApper's BI dashboards help UKG customers process all the information easily - the organization doesn't need to assign resources for processing the additional data - reducing costs and preventing disruptions.

Integration with UKG software

UKG users implementing CloudApper's BI dashboards can seamlessly integrate with their existing solutions - reducing data migration headaches and project delivery cycles.

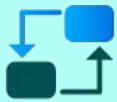

Improved data visualization

CloudApper's BI dashboards help UKG customers visualize workforce data in easily understandable charts and graphs - helping provide information to managers easily to identify trends and patterns.

About CloudApper

CloudApper is a no-code AI platform that provides a plethora of customizable solutions that enhance UKG software. The platform seamlessly integrates with UKG and helps organizations make the most of their solutions by providing unique customizations. CloudApper empowers UKG customers to make their solutions work their way with its functionalities and components without integration hassles.
